Please comment on the outstanding strengths/weaknesses of the instructor and the course.

Students
Professor Daniel Miller Runfola is a very good lecturer. The weakest aspects of the course were the guest lectures.
Amazing. I loved this class.
awesome guy, great teacher, loves to help, great motivator
Practical and applicable learning. The course was based around a great deal of computer coding labs. None of the students anticipated this, and it should be made clearer in course descriptions.
The course was still trying to find out where to go. However in the later labs the course has really hit its stride, I've learned far more in this course than any other course at the College so far.
Demonstrated a lot of patience helping students with RStudio language and presenting information in an interesting/engaging way.
This is an awesome class. I would highly recommend people to take this course
I would highly recommend incoming freshmen to take this course as it fuses knowledges from different subjects and I really have learned a lot!
Prof. Runfola was a very engaging lecturer and his talks always built off of each other in order to explore the topic of the course in more depth. His assignments related to the course's topic but never related to each other. The final assignment's goals were not clearly stated.
Dan is obviously really excited about his subject, and I enjoyed both his labs and his lectures. The course is already excellent, and will likely get even better now that he's taught it once. Tyler was also really helpful.
Dan Runfola has been one of the most interesting professors I've ever had. This course was a pleasure to take because of him.
This course was a pleasant surprise, the guest lecturers are probably the weakest portion of the class.
The presence of two instructors led to ambiguity in expectations, but the class was extremely intellectually stimulating, and challenging in the best of ways.
